GRONARD

A case study of landing page redesign

2 month | Mobile and desktop | 308 Designed page | Figma | GA4 | Shopware | Chat GPT | Hotjar

Project description

Gronard is a Germany based bicycle rack producer. They Already had a Website but they were not able to adjust it based on their needs when ever it was neccessary. Therefor they wanted to have an website which is adjustable easily.
They requested us to develop something which is easy to adjust based on shopware which is a German open-source e-commerce platform.

Goals

1. Up to date design
2. accessible for elder users
3. Shopware Compatible and adjustable
4. Improvements where it's necessary
5. Keeping the wholistic skeleton
6. Polish Information Architecture.

Design Challenges

- Achieve a cohesive visual language across the dashboard and landingpages.
- Craft a design guideline specifying the use of color, typography, and brand identity.
- Design sections that are usable and clear, effectively conveying our message.
- The deadline was tight; we had only two months to complete the entire process.
- Following WCAG

My Journey in Gronard

Setting up project

1 week

- Conduct a brief meeting.
- Perform competitive research.
- Validate received data on GA4 and Hotjar
- Defined basic tokens (Colors, typographie, spacing)
- Imported metaor design system to the project and adjusted basic components (Buttons, type inputs, ect.)
- Polish Information Architecture.
- Define overall style and tone of voice.

Weekly Design Routine

1 - 1,5 month

- Expand UI Kit as we advanced.
- High-Fidelity Wireframes.
- Present to project owner and receive feedback.
- Apply requested adjustments and finalising UI
- Handing over the designs to BA

Key insights

from brief meeting to competitive analysis, Data analysis, user test and UX evaluation

1. Information structure Should be polished, we have observed a lot of lost users
2. Who is our main users?
3. How Gronard wants to hook clients?
4. As B2B business, it's important for us to hide our prices for most of our clients.
5. Header navigation improvement
6. Registration flow drops
7. desktop First: 80% of users on desktop, 19% of purchases on desktop
8. In Google Analytics we realised that in main flow (Category->Subcategory->product listing page) We have 70% user drop.

Information architecture

+7 Pages designed in total, in both mobile and desktop versions + each two version in English and German. for 308 pages in total.

Registration / Login

Registration flow (5 pages) | Reset password (3 Pages) | Login (1 page)

Landing pages

Blog (2 pages) | About us (1 page) | Sustainability (1 page) | Services (1 page) | ADFC products (1 page)

FAQ (1 page) | Planning (1 page) | Promotion of funds (1 page) | References (3 pages)

Careers (3 pages) | 404 (1 page) | Legal documents (4 pages)

Purchasing journey

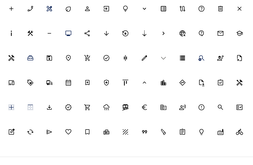
Product listing page (4 pages) | Product detail page (10 pages) | Cart (3 pages) | Check out (5 pages)

account

Profile (3 Pages) | My Activities (5 Pages) | Addresses (5 Pages) | Configurations (6 Pages)

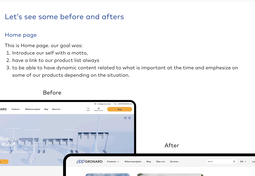
Manage Company (3 Pages)

Colours

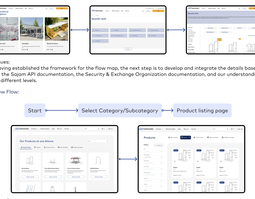


In previous website, we had two colours, although in logo there were only one. So we suggested to have only one colour in our website as well to:

- Increased consistency across brand touchpoints, creating clearer color roles and more consistent UI patterns.
- Stronger contrast between dark and primary tones, making CTAs stand out more reliably.
- Improved WCAG contrast performance, enhancing readability, button visibility, and usability for low-vision users.
- A more modern and professional aesthetic.
- Better compatibility with both light and dark backgrounds.
- Switching from yellow to a deep, high-contrast blue increases click clarity, perceived trust, and action visibility.
- Greater flexibility for future UI components and scalable design systems.
- Stronger emotional tone and improved sense of trustworthiness.
- Better overall visual balance throughout the interface.



Material Icons



Type inputs

Buttons

Let's see some before and afters

Home page

This is Home page, our goal was:

1. Introduce our self with a motto,
2. have a link to our product list always
3. To be able to have dynamic content related to what is important at the time and emphesize on some of our products depending on the situation.

Before

After

Polishing Journey To Product Listing Page

First let's see how it was previously:

Old Flow:

Start → Select Category → Select sub category → Product listing page

Issues:
Having established the framework for the flow map, the next step is to develop and integrate the details based on the Sojorn API documentation, the Security & Exchange Organization documentation, and our understanding of different levels.

New Flow:

Start → Select Category/Subcategory → Product listing page

Benefits:
Having established the framework for the flow map, the next step is to develop and integrate the details based on the Sojorn API documentation, the Security & Exchange Organization documentation, and our understanding of different levels.

WCAG compliance

What we did to keep the design WCAG AA compliance?

We contained double checking on WCAG points in each section we designed, at the end of project again we double checked everything which showed to us we need to add some minor points and also we reported the point's which should be followed by developers

Thank you! 🙏

We're so glad you stopped by. Your like and comments will be appreciated, if you enjoyed my work of course <3 I'd love to hear your thoughts! For more in-depth conversations or inquiries, feel free to reach out via email. Your feedback and interaction mean the world to us. Thank you for being part of our community!
